HANSA Data unit module is self powering and supporting flow and temperature measuring features in a water supply. With our new data unit and the digital services of HANSA, you can monitor your water supply. Critical hygiene situations like stagnating water or water temperatures above or below the normal conditions can be monitored. In cowork with our digital Service warning and alarm messages can be send.

This solution is plug and play: Just connect the module to the water supply between angle valve and faucet inlet.
